

Owning your location experience and get actionable insights from spatial data. Mapbox's flexible mapping and location building blocks integrate seamlessly into your data analytics application or data visualization. Build heatmaps, data clusters, 2D/3D choropleths, and more, all with your own data in your own workflow.

BUILDING BLOCKS

“

Mapbox’s custom cartography, data tools, and live-updating base maps bring a new level of geo insight to Tableau’s powerful business intelligence platform.

Tableau Zen Master, DataBlick

Maps

Build gorgeous maps to present data in new ways that help users discover insights.

TOOLS

Vector maps >

Smooth, scalable basemaps that deliver data straight to the device and render it with WebGL in real-time.

Custom design >

Customize basemaps to match your unique brand and user interface to keep end-users engaged.

Dynamic styling >

Style, animate and extrude maps and more with client-side interactions.

Global data

Use Mapbox’s global street and address-level data infrastructure to display user data while keeping it with you, not with us.

TOOLS

Geocoding API >

Visualize statistics for every Swiss canton, Chinese prefecture, or French arrondissement.

Enterprise boundaries >

Global administrative and postal boundaries for data joins and choropleths.

Client-side data joins >

Join data with geometries using client-side code without needing a separate database.

Cross-platform support

Run Mapbox anywhere. Data visualizations are automatically updated across web, mobile, private cloud, and on-premise.

TOOLS

iOS & Android SDKs >

Go fully native on mobile with the same tools as web.

Mapbox Atlas Server >

Deploy your entire solution on-premise behind your private cloud infrastructure.

Offline maps >

Render maps without a connection to display a fully functional map in any style.

CUSTOMER EXAMPLES

MicroStrategy

Learn how MicroStrategy upgraded its data visualization desktop app with Mapbox vector maps.
